CSR Generation

Ref. Request : RITM3948784

1. Validate the Request
2. Login to the server
3. Open /tmp
4. Under /tmp directory create a file with name “servername_ssl.cnf”

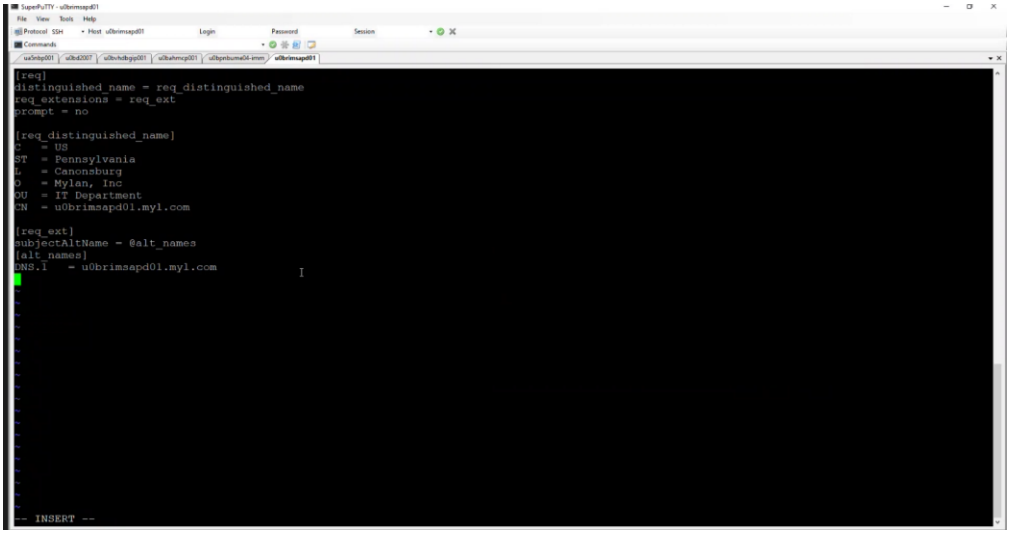

5. Feed the following entries in the servername_ssl.cnf file (As per request)

```
[req]
distinguished_name = req_distinguished_name
req_extensions = req_ext
prompt = no

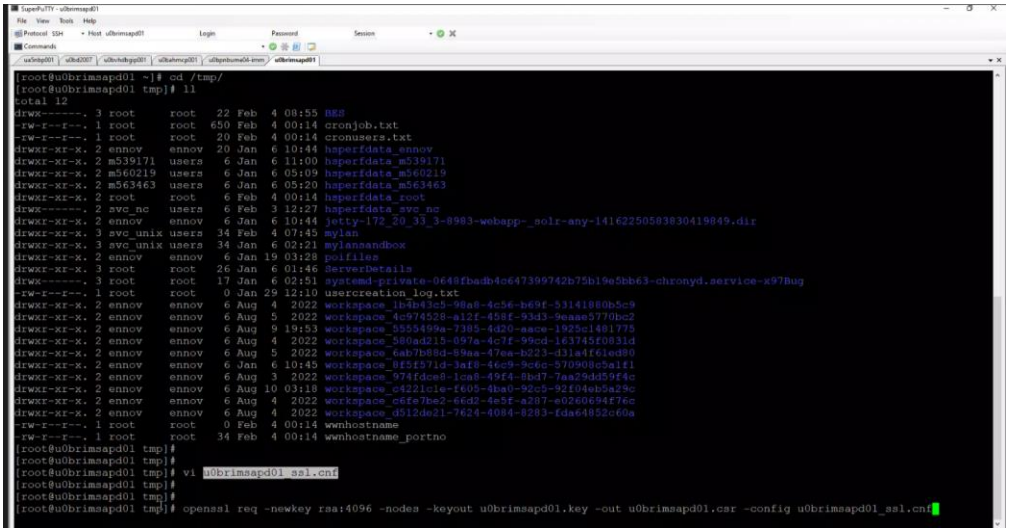

[req_distinguished_name]
C   = US
ST  = Pennsylvania
L   = Canonsburg
O   = Mylan, Inc
OU  = IT Department
CN  = u0brimsapd01.myl.com

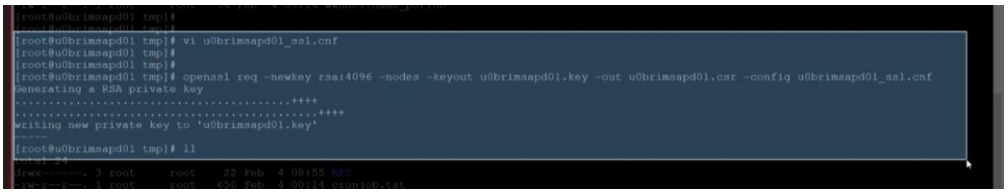

[req_ext]
subjectAltName = @alt_names
[alt_names]
DNS.1   = u0brimsapd01.myl.com
```

6. Execute the following command to generate ssl certificate

   “openssl req -newkey rsa:4096 -nodes -keyout u0brimsapd01.key -out u0brimsapd01.csr -config u0brimsapd01_ssl.cnf” [Change the server name for different server]

7. Now csr file and it’s key will be generated under /tmp directory

u0brimsapd01.csr
u0brimsapd01.key
