Summary:

- 12+ Years of experience in Linux RHEL 6, 7, 8,9 and SUSE 15.
- Strong expertise in end-to-end Linux system administration, including user and security management, LVM/storage management, filesystem tuning, kernel parameter optimization, and OS hardening.
- Skilled in incident management, root cause analysis (RCA), and on-call support, consistently reducing MTTR through SOPs, automation, and standardized recovery procedures.
- Good exposure to patch management.
- Basic knowledge on AWS servers.
- Knowledge on VM Ware activities.
- Good Experience in ITIL Process. Working on Incident & Change Management issues.

Experience Summary:

- Currently working as a SENIOR TECHNICAL LEAD in Happiest Minds Technologies Ltd

Experience Details:

Organization : Happiest Minds Technologies Ltd
Designation : SENIOR TECHNICAL LEAD
Role : Linux Administrator
Period : June 2018 - Till date

- Worked a System Administrator with TCS, Bangalore from June 2017 to May 2018

  Organization : TCS
  Designation : System Administrator
  Role : AIX Administrator
  Period : June 2017 to May 2018

- Worked as AIX Administrator in IBM India Pvt. Ltd, Bangalore from Mar 2014 –May 2017

  Organization : IBM India Pvt. Ltd
  Designation : AIX & Linux System administrator
  Role : AIX/Linux Administrator
  Period : Mar 2014 –May 2017

Roles and Responsibilities:

- user administration ((user creation)
- process related issues, CPU and memory utilization
- FS&NFS Mounting on UNIX systems
- SNOW queue monitoring and assigning tickets within the team.
- Routing the tickets to the other respective teams when action is pending with other teams.
- health check on the infra with the SNOW Auto-Generated Tickets.

- Working on P2(omnibus)/P3&P4(Omnibus and user raised) and providing proper resolution.
- enabling Maintenance before or during the activity in the SNOW Event Management.
- Escalating to L2 when there are any challenges.
- Process & Report management.
- Follow-up mails and the active SNOW tickets.
- Providing follow up to the next shift people.
- System routine maintenance & reboot.
- RPM Package installations (with L3 guidance)
- Working all types of incident,RITMs and changes.
- Troubleshooting L1 resources escalated tickets.
- Change review peer and CTASK on the transition check list.
- Working with the vendor for the feasibility check to upgrade the Hardware Firmware or the Virtual Infra.
- Unix VM / Physical Server Transitions.
- Handling P2 Incidents and user raised incidents and schedule a call and work with the other teams and provide proper resolution.
- Work on Backup Failure related Incidents/cases.
- Work on any P2 and P3 escalation call.
- Clone/Snapshot management for UNIX VM Servers.
- Performing the Normal/Single Environment/Standard Low-Priority Change Request.
- Change tasks for review.
- Linux filesystem management & ASM disk configuration.
- Working on DR activities.
- OS ((minor update and In-Place upgrade) & Firmware Upgrade activities for CISCO, HPE and DELL Physical servers
- Move the Blade servers from one Rack to another Rack
- open case with red hatt, generate Sos report.
- Filesystem creation and ASM disk creation for configuration.
- Standardizing the Disk/Memory/vCPU for the Unix virtual Servers.

- VMware tools upgrade to all UNIX VMs.
- Train L1 on technical and process related areas.
- Providing follow-up to the next shift of people.
- Inventory Update.
- Work on any level of Escalation on the Tickets handled by the L1/L2 associates and assist in resolve the issue.
- Linux server OS image backup using native options.
- Advanced LVM management.
- LVM & SAN volume migration (Linux/AIX).
- Working on P1/P2 tickets and handling escalation calls.
- ISCSI & SAN volumes management and MPIO configuration.
- Working on UNIX Pacemaker Cluster and provide support to application team on cluster related issues
- AIX server OS backup,recover,restoration and Upgrade using NIM.
- Working on P1/P2 Incidents Chronology and Documentation the actions taken to resolve the Incidents.
- Capacity management of Linux/AIX servers like increase Memory,decreasememory,CPU management and adding removing adapters using DLPAR.
- LPAR frame Migration (LPM).
- SNMP Trap configuration for HW monitoring.
- Work on re-occurring issues and derive a plan to remediate the issue and review with SME.
- Working on Corrective Action & Preventive Action and adhering to SLAs
- Final level Server Infra Hardware Transitions and confirm the closure.
- Server Retirement & Disposal.
- Implementing Critical Change Activities and Participating in CAB call.
- Work on Long Pending Vendor Tickets and follow up with respective stack holders and OEM/vendors for mitigation closure.

- Work with vendors for the Identified Vulnerabilities and check the feasibility to create a plan to implement and review with SME.
- Mentoring L1/L2 and training them in the process & technical role.
- Work with CSV and QA Team for the new Standard Change Template Creations.
- Work with POA, SOP, and work instructions for all activities.

VMWARE Roles and Responsibilities:

- Creating Virtual Machines in V-Center.
- Build new RHEL Templates.
- Clone & Deploying a VM from the template.
- Increasing and decreasing the virtual machine Memory, CPU as per client requirements.
- Virtual Machine Power On - Power Off - Restart Activities.
- Add the disks from V-Center data stores to client partitions.
- Migrating the server from one host to another host through V-Motion Concept (Host Level Live Migration).
- Migrating the server from one data store to another data store (Storage Migration).
- Taking VM Snapshots & Working on disk consolidations.
- Creating new data store based on NFS Volumes which is mapped to ESXI Hosts.
- Upload files and ISO images to data stores.
